

NOTES

TASK 2

Problem.3:

the cmath library and the abs and phase functions.

Problem.4

x.strip() function is how it remove spaces in from the input number
int("123") ☹, int(" 123 ")

Problem.6

the split here is different as in for string so : "Hello World".split() become :
["Hello", "World"]

also the join and reversed function , the reversed function can also be ::-1.

problem 7

echo : prints what i write inside ""

date : write the day of week , month , day of month , time , time zone , year

lsb_release -a : shows info about ubuntu version i am using.

systemd-detect-virt : if it virtual " kvm" "oracle" or real "none".
